### **DETAILED ACTION**

Pursuant to an Appeal Conference involving Johann Richter, Sreeni Padmanabhan and Alton Pryor, PROSECUTION IS HEREBY REOPENED. See rejection set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

/Johann R. Richter/

Supervisory Patent Examiner, Art Unit 1616.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 91,94-104 are rejected under 35 U.S.C. 103(a) as being unpatentable over The Agrochemical Handbook, 3rd Edition, The Royal Society of Chemistry, 1991 (A0111/Aug 91 or A0133/Aug 91) and Surfactants and Other Additives In Agricultural Formulations (textbook), Reports Group, Hewin International John Wiley & Sons, Inc., 1998, pp. 5,20-25. The Agrochemical Handbook teaches the herbicidal acid form of 2,4-D and dicamba. The Agrochemical Handbook does not teach or suggest the addition of a surfactant to either acid herbicide. However, the textbook discloses that surfactants are essential components of herbicide products, aiding in the dilution and shelf life of the herbicide. The textbook teaches that the use of nonionic surfactants such as alkylphenol ethoxylates, long chain alkanol ethoxylates and ethylene oxide/propylene oxide block copolymers (p. 20) is common in pesticide and herbicide formulations (p.7). The textbook teaches that in the pesticide and herbicide formulations such surfactants when combined with herbicide or pesticide produce an emulsion (p. 20). These surfactants are recited in the instant claims. It would have been obvious to add said surfactant or surfactants to 2,4-D or dicamba in acid form. One would have been motivated to do this in order to enhance the shelf life and to aid the dilution of the herbicide. This combination of references would result in an invention consisting of the claimed herbicide and claimed surfactant only, making the combination to read on the instant claim directed to "consisting of". It is well known that a herbicide composition is to be use in a method comprising applying the composition to crops/plants in order to control weed growth. With respect to amounts and ratio of ingredients, it would have been obvious for an artisan in the field to have determined the optimum amounts/ratios

of ingredients. One would have been motivated to do this in order to make an invention that would have been most effective at controlling weeds without destroying the plants/crops.
